RE: 59594 GP PRO Pacific Blue Ultra™ Water Resistant Mechanical Towel Dispenser

Dear Valued Customer,

I am pleased to respond to your inquiry regarding the above listed dispensers, which have design features to help reduce cross contamination and comply with facility Hazard Analysis and Critical Control Point (HACCP) requirements.

The dispenser SKU listed above has been tested against IEC Standard 60529 (Issued 2013/08/29 ED: 2.2 Degrees of Protection Provided by Enclosures) for water resistance. During this test, the unit is sprayed with water from several directions over a 10-minute test period. While the tested device does not meet standards outlined in IEC 60529 and is not Ingress Protection (IP) rated, the cover of this the tested unit did not allow any water to contact the towel roll (the entire roll remained dry), and the unit functioned properly after testing.

This SKU features rubber seals to ensure paper towels are not damaged or contaminated during high pressure wash-down or other facility cleaning procedures. Components of these products are also made from zinc coated steel and aluminum for operations that require dispensers to be washed frequently. These products may help meet higher public health standards, assist in pollution prevention and control your operating costs through waste and maintenance reduction.

Please contact me directly if we may provide any additional information or further assistance in this matter.

Sincerely,

Jenna Foth
