

## Assembly for Retro Fit

**A** Position stand upside down on a flat surface.

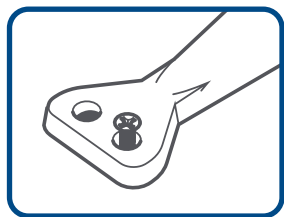

**B** Remove (8) screws securing spider bracket to carousel.

**C** Remove spacer and replace with new spacer provided.

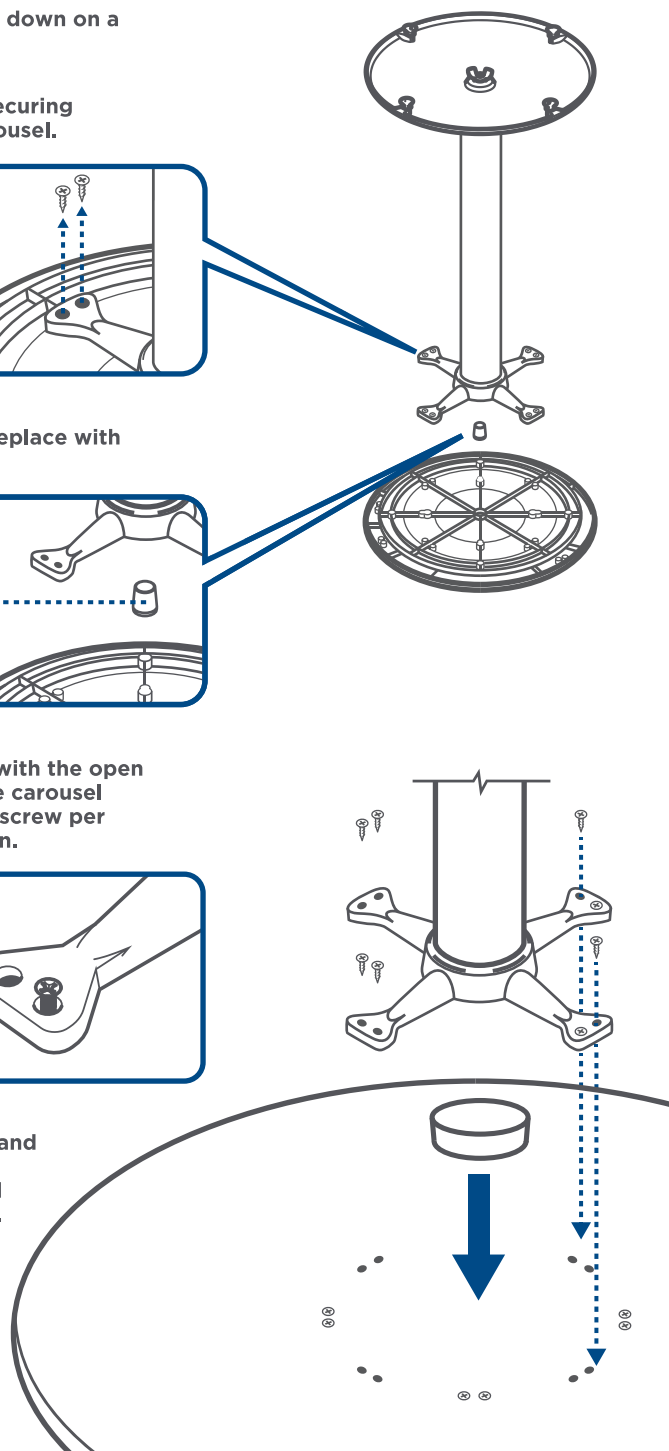

**D** Align spider bracket with the open threaded holes on the carousel tabletop and install 1 screw per flange. Do not tighten.

**E** After base is aligned and set properly, insert remaining screws and tighten all (8) screws.

## Assembly for New Installs

- ⚠ Follow these instructions carefully. Failure to do so could result in instability of the dispenser stand.
- ⚠ If retrofitting the carousel tabletop to a previously assembled dispenser stand, see the back cover of this guide for assembly instructions.
- ⚠ Product is assembled upside down.

**1** Position carousel tabletop on a flat surface with carousel facing down. Place spacer [A] in the space at the center of the carousel tabletop.

**2** Insert the screw rod [B] through the spider bracket [C] ensuring that the square rod head is between the alignment ribs. Place spider on the carousel tabletop so the screw rod rests on top of the spacer.

**3** Place the column [E] over the screw rod until the column rests on the spider between the alignment rings, then seat the tube aligner [F] on the column. The screw rod will be protruding through the center hole.

**4** Align the spider bracket with the holes on the carousel tabletop. Fasten the spider to the carousel tabletop with (8) screws [D].

**5** Position the base plate [G] so the threaded holes along the outer edge are facing up. Place the center hole over the screw rod, seating the column into the groove on the opposite side of the base plate. Place the flat washer [H] and the lock washer [I] over the screw rod before securing tightly with the wing nut [J].

**6** Screw leveling feet [K] or wheels (SSBASEWHEELS sold separately) into the (4) holes on the outer edge of the base plate. Turn the assembly right side up.
